

Project: Automated Parallel Goal-Based Adaptivity
Student: Yue Wu
Supervisor: Prof. Patrick Farrell

Meeting Log

Meeting on 2026-05-20

Progress: Basic understanding of the framework: weak formulation $\rightarrow$ space-time finite elements $\rightarrow$ goal functionals $\rightarrow$ DWR $\rightarrow$ error identity $\rightarrow$ error estimation in enriched spaces

Next Steps: Code implementation: 2D heat equation example. Compare the error in J with the known exact solution.

Notes: choice of goal functional (time regularity)

Meeting on 2026-05-14

Next Steps: Working on the 2D heat equation example.

Notes: DG0 in time: backward Euler
